

**DECREASE COST.
REDUCE RISK.
INCREASE SAFETY.**

ONE COMPANY. MULTIPLE PROGRAMS. NATIONAL RESULTS.

As a pioneer in the development and deployment of advanced driver training simulation technologies, DriveWise has built custom driver training programs for several Fortune 500 companies. Whether you require a standardized testing method for employee training, or online work modules, DriveWise can build a program based on your core learning needs. Using state-of-the-art virtual reality driving simulators, DriveWise students have access to advanced learning solutions that increase vehicle operator performance, safety and preparedness for daily, complex and unusual driving situations.

DriveWise is a leading distributor of virtual simulation technology. Each simulator provides a safe, risk-free and cost-effective environment to train employees in safe driving techniques. The simulator comes with several pre-built scenarios, as well as performance measurement software.

Fleet wide standardization.

- Use a single method for evaluating employee driving habits. Get accurate, timely employee progress reports that are benchmarked against your company's core learning objectives.

Online training.

- Maximize your recruitment efforts with online training scenarios. DriveWise can build online training modules, both for new hires and existing employees. The online learning environment can be customized to match your company's look and feel.

Mobile training at your facility.

- Our instructors will travel to your site and bring the training to you. Our fully equipped, state-of-the-art mobile classroom trailers will drive to your location and train your staff at your convenience, saving you time, fuel and money.

PROGRAM FEATURES:

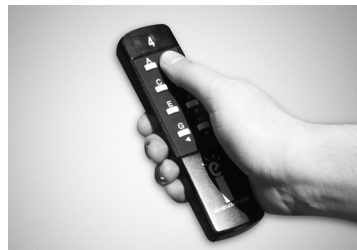

- ▶ New hire training and pre-hire screening
- ▶ Recurrent and remedial training
- ▶ Occupation-specific
- ▶ Focus on fuel efficient driving
- ▶ Online learning modules
- ▶ Programming purchased as needed
- ▶ Interactive classroom discussions
- ▶ Real-time instructional feedback
- ▶ Performance record

STATE-OF-THE-ART VIRTUAL REALITY SIMULATION:

Simulation is one of the most effective ways to practice driving manoeuvres. In a simulator, participants can put classroom/theoretical lessons learned to the test, without coming into harm's way. DriveWise offers multiple simulators to meet your training needs, offering participants a high-fidelity, interactive training experience.

Participants learn: driving in adverse weather conditions, city and rural driving, backing techniques, intersection scanning, decision making and space management.

INTERACTIVE LECTURES:

Maximize participant learning with Engage™, a proprietary model developed exclusively by DriveWise instructional designers. At the end of each learning module, participants are able to retain, recall and reuse information in both real-world and simulated conditions.

Participants use e-learning tools throughout the entire learning process, enabling instructors to engage, test and monitor student progress.

CUSTOM COURSEWARE:

Whether you need to improve fuel economy, reduce vehicle collisions or improve driver efficiency, there is a program for your company. DriveWise can build a training program based on your business objectives or our instructional design team can conceptualize, build and deploy an effective, high-quality training program that complements your existing in-house courseware.
